Center Announces Strategic Alliance with CalQLogic, Inc.

December 2017 – Center for Supply Chain Studies (the Center) is pleased to announce a new business alliance with CalQLogic, Inc. (CQL) of Los Angeles, CA.

The companies will pool together their capabilities and expertise to provide a more robust analysis and interpretation of the business processes and challenges impacting today's healthcare supply chains.

"We thank CQL for their support of our Studies and are enthusiastic about incorporating their real-time analytics into our current modeling processes," said Bob Celeste, the Center's Founder. "By providing us with special access to their TriggerWare software platform, we can more effectively visualize the impact of regulation changes, business practices and new technologies that we believe will benefit the entire industry."

Deborah Taylor, CEO of CQL adds, "As a real-time analytics solution provider, we have great interest in problem domains where decisions are inherently event-driven. Working with the Center provides us a unique opportunity to understand the true nature of the supply chain's pain points, directly interact with the thought leaders who best understand them, and garner invaluable insights to successfully redress these problems."

The companies are set to begin their collaboration this month with the launch of the Center's newest Studies: "DSCSA & Blockchain: Phase 2" and "Blockchain for the Cold Chain".

Center for Supply Chain Studies

The Center was established in 2015 as a neutral, nonprofit research and educational forum designed to support the healthcare industry in its mission to improve supply chain efficiencies, increase productivity and streamline regulatory compliance. We host group- funded research Studies to openly exchange ideas and share expertise, supporting our belief that the combination of unique perspectives and viewpoints leads to greater discovery and innovation. www.c4scs.org

CalQLogic provides real-time data analytics and event correlation solutions based on its patented TriggerWare platform that offers customers the capability to rapidly create new kinds of mashup applications by formulating ad-hoc queries in First Order Logic (FOL) and alerts over many disparate Internet and enterprise data sources. The platform can be used in both the enterprise and consumer markets, and facilitates rapid development and deployment of real- time analytics and automation applications in pharma, supply chain, financial, IoT, and other markets. www.calqlogic.com
